

讓Wii與你的電腦連結

Johnny Lee: Wii Remote hacks

可連接藍芽的軟體

- Windows內建電腦藍芽驅動軟體(重新安裝 Widcomm **ASUS** 所提供的 **5.1** 版舊驅動程式)
- WiimoteConnect : [點我下載](#) (必須安裝 [Net Framework 3.5](#))

WiiRemote

The screenshot displays the 'WiiRemote - Active' application window. It features a menu bar with 'File' and 'Options'. The main interface is divided into several sections:

- Controller:** A vertical image of a white Wii Remote.
- Motion Sensor:** A graph showing three oscillating lines (X:Blue, Y:Red, Z:Green) and a small square plot to the right.
- IR Sensor:** A dark area with a yellow horizontal line and three small colored dots (white, yellow, white) at the bottom.
- Nunchuk:** A text box displaying the following data:

```
Nunchuk: ON  
Analog X:254  
Analog Y:238  
Motion X:174  
Motion Y:318  
Motion Z:302
```

At the bottom, there is a status bar with 'Cursor enabled' on the left and 'Battery:36%' on the right. An 'Enable Cursor' button is located between the Nunchuk data and the battery status.

定位用軟體

- Wiimote Whiteboard : [點我下載](#) (Johnny Chung Lee的原始版本)
